Vancouver, BC, V6S 0G3

EXECUTIVE SUMMARY

- 6+ years of experience as a Software Engineer, proficient in building web apps from scratch.
- Proven expertise across the entire software development lifecycle, delivering high-quality results consistently.
- Passionate about optimizing workflows and enhancing efficiency through innovative tools.
- Skilled in transitioning traditional infrastructure to cloud-based (micro-service) environments, enhancing system scalability and reliability.
- Strong grasp of Python Data Science tools and foundational knowledge of machine learning principles.

TECHNICAL SKILLS

- Languages and Frameworks: Golang (Gin/Gokit/Gorm), Ruby (Ruby on Rails), JavaScript (Vue2/3), Typescript (Angular5), HTML5, CSS/SASS (Bootstrap/Angular Materials/ElementUI), C, PowerShell, Java (Spring Boot/Spring Cloud), Python3(Numpy/TensorFlow)
- Software/Cloud Tech: ElasticSearch, Kibana, Logstash, Prometheus, Grafana, Docker, Kubernetes, Helm, Consul, VSCode, Git(Gitlab/Github), Jira, Confluence, AWS, Nginx
- Databases: MySQL, PostgreSQL, MongoDB, OpenTSDB

WORK EXPERIENCE

SENIOR SOFTWARE ENGINEER   Apr. 2020 - Oct. 2023

CHINA TELECOM, Hangzhou, China

KEY DUTY
- Led a team of 4 full-stack developers to build a low-code development platform that decoupled developers from non-technical personnel.
- Led the frontend development of 3 major projects, supporting up to 6 backend developers simultaneously, and spearheaded the maintenance of legacy projects through code refactoring, component re-encapsulation, and new feature implementation.
- Independently engineered the frontend of the Cloud-WiFi management platform using Vue3 from scratch.
- Owned DevOps tasks, including configuring CI/CD pipelines with GitLab, integrating ELK for logging, and implementing MinIO as S3 storage.
- Engineered a GoKit-based microservice to collect and aggregate Kubernetes cluster metrics, orchestrating data flow into OpenTSDB for efficient persistence. Developed a dynamic Vue3 and ECharts dashboard for sophisticated data visualization and proactive alert management.

HIGHLIGHTS
- Promoted the low-code platform within the enterprise, actively used by over 100 employees across 5 departments.
- Engaged with users through training, documentation, and feedback collection for requirements planning.

SOFTWARE ENGINEER   Oct. 2019 - Apr. 2020

RAONI TECHNOLOGIES, Jinan, China

KEY DUTY
- In charge of migrating traditional monolithic backend API endpoints to a highly available microservices architecture, integrating components such as Consul, Grafana, ELK stack, Zookeeper, and Kafka. Established a stable infrastructure to simplify the development and integration of future services.
- Developed a decoding configuration management platform integrated with China Telecom IoT Cloud.
- Designed and implemented data pipelines for processing and analyzing data collected from sensors embedded in hospital logistics equipment, optimizing data storage and retrieval.
- Developed a data pipeline to ingest and process data from IoT devices, and collaborated with Academician Li-Ren Zhang to create a predictive model for hospital equipment life cycle using machine learning techniques and the collected data

HIGHLIGHT
- As the company's technical representative, conducted roadshows with the local government in Malaysia, which subsequently led to the establishment of our company's office there, strengthening the company's footprint in the Southeast Asian market.
- Collaborated with Academician Li-Ren Zhang on a sophisticated digital modeling initiative, successfully employing machine learning techniques to achieve a model accuracy above 95%.

SOFTWARE ENGINEER   **Aug.2016 - May 2019**
ZEBRA TECHNOLOGIES, Long Island, US

KEY DUTY
- Customized and maintained an Android app running on mobile scanners to meet new testing requirements.
- Collaborated with mechanical engineers to build automation testing system. Developed Ruby scripts to control the hardware through Raspberry Pi GPIO for implementing automated testing, and created a frontend dashboard app for result visualization.
- Developed Ruby scripts to file bugs found through automation testing to JIRA using JIRA REST APIs.
- Engineered revisions to legacy test plans by identifying and replacing manual test cases with automated testing solutions.

HIGHLIGHT
- Converted 28% of manuel test cases to automation testing, reduced the workload of manual testers by 31% through automation testing fixtures.
- The 24/7 operation of automation testing fixtures decreased test cycle duration by 25% and accelerated product delivery timelines by 15%.

EDUCATIONAL
- Master of Science in Computer Science, New York Institute of Technology (GPA 4.0/4.0)
- Bachelor of Applied Science in Chemical Engineering, University of Toronto

MISC. INFORMATION
- Languages: Fluent in English and Mandarin
- Personal Knowledge Base: https://chocolateacecream.github.io/vuepress-blog/`
